FOMAPAN 100 Classic
BLACK-AND-WHITE NEGATIVE FILM

In general
FOMAPAN 100 Classic is a panchromatically sensitized, black-and-white negative film designed for taking photographs. The film meets high requirements for low granularity, high resolving power and contour sharpness and a wide range of halftones. FOMAPAN 100 Classic has a nominal speed rating of ISO 100/21°, but due to its wide exposure latitude the film gives good results even when overexposed by 1 EV (exposure value) (as ISO 50/18°) or underexposed by 2 EV (as ISO 400/22°) without any change in processing, i.e. without lengthening the development time or increasing the temperature of the developer used. To make prints or enlargements, Fomabrom- and Fomaspeed-type enlarging papers are recommended; however, all sorts of black-and-white enlargement papers can be used.

Processing
Safelighting: infrared light or total darkness

Development
FOMAPAN 100 Classic can be processed in all common negative developers. Recommended development times are shown in the table below (the development times are related to development in a spiral developing tank - agitation or turning over continuously during the first 30 seconds, then during the first 10 seconds in every minute). In this way, medium-contrast negatives can be obtained.

When the development time has elapsed, the film is recommended to be shortly rinsed in distilled water or dipped in a 1 % acetic acid solution for 10 seconds.

Fixing
At a temperature ranging from 18 to 25 °C for 10 minutes in any common type of an acid fixing bath, or for at least 3 minutes in Fomafix rapid fixer.

Washing
The film should be washed in running water: for 30 minutes and 15 minutes the temperature of water being below 15 °C and over 15 °C respectively. It is recommended to finish the processing with the film being rinsed in distilled water, or dipped in a wetting agent solution.

Storage
Unexposed films should be stored in the original packaging in a cool, dry place (temperature ranging from 5 to 25 °C, relative humidity from 40 to 60 %), out of reach of harmful vapours, gases and ionizing radiations. Films stored in a refrigerator and a freezer should be acclimatized to room temperature for approx. 2 and approx. 6 hours respectively. Exposed films should be processed as soon as possible.

Packaging
FOMAPAN 100 Classic is available in the following sorts:
- 120 rollfilm 60 mm wide, exclusively on a 120 spool; identification edge markings: “ULTRA 100”
- double-edge perforated 35 mm film in 135-36 and 135-24 cartridges for 36 and 24 exposures 24 x 36 mm; bulk lengths of 17, 30.5 and 50 m in a darkroom packaging; identification edge markings: "FOMAPAN 100’ or "ULTRA 100’
- sheet film (for large-format cameras) sized: 9 x 12, 10 x 15, 12 x 16.5, 13 x 18 and 18 x 24 cm in a box of 50 sheets. Orientation emulsion side of the film - is determined by a notch located on the right upper corner of the short side of the film format.

Other sizes are subject of an agreement with the manufacturer.

The product has been produced and marketed in conformity with a quality system according to the international standard EN ISO 9001.
